

5A Buck LED Driver with Integrated MOSFET

General Description

The VAS1263 is a step-down constant current high brightness LED (HBLED) driver with integrated power switch. VAS1263 provides a cost-effective solution for outdoor lighting, architectural, automotive headlight and other LED illumination applications. VAS1263 can operate from 5V to 40V and provide an externally adjustable output current up to 5A.

The device is well suited for applications requiring a wide input voltage range. The high-side current-sensing and an integrated current setting circuitry minimize the number of external components while delivering an LED current with $\pm 5\%$ accuracy. A novel control algorithm ensures excellent input-supply rejection and fast response during load transients and PWM dimming. The device operates up to 400 KHz switching frequency, thus allowing for small component size.

The device operates over the $-40\text{ }^{\circ}\text{C}$ to $+85\text{ }^{\circ}\text{C}$ temperature range and available in thermal enhanced SOP8 package.

Absolute Maximum Ratings ^(Note1)

Parameters	Maximum Ratings
VIN, SNS, SW to GND	-0.3V to 44V
VIN to SNS	-0.3V to +0.3V
ADJ to GND	-0.3V to 6V
VCC to GND	-0.3V to 18V
Operating temperature range	-40 °C to +85 °C
Junction temperature	-40 °C to +150 °C
Storage temperature range	-65 °C to +150 °C
ESD human body model	2000V

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits. Electrical Characteristics state DC and AC electrical specifications under particular test conditions which guarantee specific performance limits. This assumes that the device is within the Operating Ratings. Specifications are not guaranteed for parameters where no limit is given, however, the typical value is a good indication of device performance.
